# Ahmad Ramzy

*Software Engineer*
Alexandria, Egypt
+201126423940 ahmadramzy988@gmail.com linkedin.com/in/ahmadramzyag ramzy98.github.io

## Summary

Fullstack Software Engineer with over 4 years of experience, driven by a philosophy of clean architecture and making a tangible impact through careful engineering. I specialize in bridging the gap between high-performance frontend interfaces and scalable backend systems, with a proven ability to lead technical foundations from zero to production.

## Experience

**Full Stack Software Engineer** **Mar 2024 – Present**
*Centroid Solutions, Remote - Dubai, UAE*

- Served as one of the initial two engineers tasked with architecting the end-to-end technical foundation for a new CRM platform; scaled the product and processes as the team grew to 15+ cross-functional members.
- Spearheaded the initial frontend implementation using **React.js**, **TypeScript**, and **Tailwind CSS**, establishing the design system and core component library that standardized development for the incoming engineering team.
- Engineered scalable backend services using **Node.js**, **Fastify**, and **Prisma**; implemented **Redis** for server-side caching to optimize data-heavy dashboards and maintain sub-200ms API response times.
- Architected the initial payment infrastructure and orchestrated the integration of 8+ global Payment Service Providers (PSPs) ; engineered a resilient webhook handling system that successfully facilitated **2,000+ transactions** with 100% data integrity, ensuring secure, real-time synchronization from the ground up.
- Maintained 99.9% platform reliability by participating in on-call rotations to resolve critical production incidents and promptly addressing customer-reported bugs to improve overall UX.
- Collaborated daily with Product Managers and stakeholders to translate business requirements into technical roadmaps, evolving the product from an initial MVP into a mature production environment.

**Frontend Software Engineer** **Oct 2022 – Jan 2024**
*Bayzat, Remote - Dubai, UAE*

- Part of a team responsible for developing and optimizing core features using **React** with **TypeScript**.
- Collaborated with the team to implement a shift scheduler feature with a calendar view, allowing admins to assign and view employees' weekly or monthly schedules, optimized to handle over 4,000 cells in single render, where each cell represents a user's shift, without performance issues.
- Collaborated with the team to develop a deduction system for admins to set salary deduction policies based on user check-in delays.
- Contributed to migrating legacy features from **Ember.js**, improving performance and usability.
- Collaborated with the frontend core team to implement design system components, ensuring consistency and reusability across the application for use by other teams.
- Implemented automated tests with **Cypress** and utilized **Storybook** for component development.
- Engaged in the entire product development lifecycle, from ideation to deployment.

**Full Stack Software Engineer** **Sep 2021 - Aug 2022**
*Knowledge Officer, Remote - London, UK*

- Led the revamp of the company's online platform using **React** with **TypeScript**, significantly enhancing user engagement and satisfaction.
- Implemented automated tests with **Cypress** for integration and component testing.
- Contributed to backend development tasks including feature implementation, bug fixes, and system enhancements using **Ruby on Rails**.
- Collaborated daily with cross-functional teams to ensure smooth project execution and communication.
- Resolved customer-reported bugs promptly, improving product quality and user experience.

## Education

**Alexandria University** **Sep 2016 – Aug 2021**
*Bachelor of Science:* ***Computer and Communications Engineering*** *Alexandria, Egypt*

## Key Projects

**Frame Forge** (Link) | (React) **Jan 2026**

- Built a multi-viewport testing tool with **React 19** and **TypeScript** that enables simultaneous UI validation across device sizes, accelerating QA cycles.
- Engineered a runtime injection engine for real-time CSS/JS testing on iframes, using **Zustand** for complex state management.
- Optimized performance using **Vite** and React Error Boundaries, providing a stable, low-latency debugging environment for high-load applications.

## Technical Skills

**Languages**: JavaScript, TypeScript, Ruby
**Frontend**: React, Next.js, Redux, Zustand, Tailwind CSS, Storybook
**Backend**: Node.js (Fastify, Express), Prisma, Ruby on Rails, Redis
**Tools**: Cypress, Vite, Git, CI/CD, RESTful APIs
